

EULAR Foot and Ankle Study Group

The purpose of the Foot and Ankle Study Group is to encourage wider communication within the EULAR family for HPs with an interest in foot and ankle care and to encourage greater participation during the annual EULAR congress. The group aims to convene annually at the EULAR congress and communicates electronically in between congresses as required.

The group is informal and provides an encouraging and open forum that enables HPs new to EULAR or the field to gain confidence in preparing and presenting research, audits, papers and presentations.

The group sits within the hierarchy of EULAR HP committees and articulates directly with the HP scientific sub-committee.

The EULAR Foot and Ankle Study Group has four main objectives:

To work towards improved standards of foot care across the EULAR member countries

To reduce unjustifiable variations in foot and ankle care.

To provide a forum for the foot and ankle community across the EULAR member countries to share ideas and identify priorities

To establish a collaborative network through which to develop a EULAR-wide agenda for studies into foot health interventions.

The foundation members of the foot study group on Thurs 13th June 2013 were:
